COURSE INFORMATION

Purpose

This course is designed to focus on recent developments in the management of cardiovascular disease. Topics have been identified based on prevalence in practice, difficulty in managing, and probability of new information being available.

Target Audience

This course is designed for primary care physicians including family physicians, internists, hospitalists, general practitioners, cardiologists, cardiothoracic surgeons, perfusionists, physician assistants, and nurse practitioners.

Format

Speakers will use a combination of presentation and interactive educational techniques. Participants will be encouraged to ask questions related to practice issues. Program materials will be provided at registration.

Educational Objectives

Based on the information presented, you will be able to:

- Identify the various management guidelines and treatment options for atrial fibrillation including, anticoagulant medications, surgical ablation, and hybrid approaches.
- Apply current diagnosis and treatment methodologies for valvular heart disease in order to improve patient outcomes.
- Examine various aspects of aortic valve disease including the latest TAVR procedure in order to identify appropriate treatment options for your patients.
- Examine mitral valve disease, and identify appropriate treatment options including catheter-based technologies.
- Examine current guidelines and research in order to identify strategies for the management of ischemic heart disease in your patients.
